

Symbolic Logic: An Introduction

Satisfiability and associated problems

Boolean satisfiability

What we saw: Entailments, validity and satisfiability are related.

Boolean satisfiability

What we saw: Entailments, validity and satisfiability are related.

- SAT:** Given a Boolean formula, is there a satisfying assignment to the variables?
- The classic NP-complete problem (Cook 1971)

Boolean satisfiability

What we saw: Entailments, validity and satisfiability are related.

SAT: Given a Boolean formula, is there a satisfying assignment to the variables?

- The classic NP-complete problem (Cook 1971)

Variations of the SAT problem:

Model counting (#SAT): How many satisfying assignments does a Boolean formula have?

- Computational complexity is #P (Valiant 1979)

Boolean satisfiability

What we saw: Entailments, validity and satisfiability are related.

SAT: Given a Boolean formula, is there a satisfying assignment to the variables?

- The classic NP-complete problem (Cook 1971)

Variations of the SAT problem:

Model counting (#SAT): How many satisfying assignments does a Boolean formula have?

- Computational complexity is #P (Valiant 1979)

Max-SAT: Given a Boolean formula as a CNF, what is the maximum number of satisfiable clauses in it?

- NP-hard

Boolean satisfiability

What we saw: Entailments, validity and satisfiability are related.

SAT: Given a Boolean formula, is there a satisfying assignment to the variables?

- The classic NP-complete problem (Cook 1971)

Variations of the SAT problem:

Model counting (#SAT): How many satisfying assignments does a Boolean formula have?

- Computational complexity is #P (Valiant 1979)

Max-SAT: Given a Boolean formula as a CNF, what is the maximum number of satisfiable clauses in it?

- NP-hard

Weighted Max-SAT: Given a Boolean formula as a CNF, where each clause is assigned a non-negative weight, find an assignment to all the variables that maximizes the total weight of the satisfied clauses
